Education

- B.S. Econ, Minor Computer Science from Vanderbilt University Status - Graduated

Experience

Member Services at SHACK15, San Francisco *May 2026 to Present*

- Establish the face of the brand as the first point of contact for members, guests, and the public
- Uphold exceptional standards throughout swift conflict resolution and problem solving
- Build rapport and swiftly recall personal details of new and old members to distribute individualized luxury care for over 2,000 members
- Oversee event check-in and enforce house policies, cap restrictions, and confidentiality

Founder at Madras, San Francisco *August 2026 to Present*
Something new for artists

Full Stack AI Engineer (Co-founder) at Lynx, San Francisco *Nov 2025 to Aug 2026*

- Secured 2 angels who offered early-stage mentorship services on our platform after 2 weeks of cold outreach to 50 students, alumni, professors, investors. Pitched the Hult Prize in front of Nashville founders and angel network.
- Independently curated brand design, logo, tagline, and website design.
- Co-founded Vanderbilt-based cofounder discovery platform using **Claude-based agentic** flows, **Convex**, **Clerk**, and **Vercel** that connects students, alumni, and investors.
- Designed and implemented in **JavaScript** an end-to-end account system supporting distinct user types including an onboarding wizard, JWT-based session management via **Clerk**, and server-side route protection that reads from JWT claims with zero DB round-trips per request
- Architected a multi-route **Next.js** 16 app with three distinct layout contexts — authenticated app shell, marketing pages, and standalone onboarding — each with appropriate auth guards enforced in middleware rather than per-page
- Secured webhook ingestion endpoint against spoofed payloads by verifying Svix signatures before processing any event; returns 400 on invalid signatures and 500 on missing secrets rather than silently failing

Club Receptionist at Soho House, Nashville *Nov 2025 to Aug 2026*

- Welcomed and managed entry of **thousands of high profile** members and guests, ensuring private and secure access.
- Advised members on membership options, billing, applications, guest policies, and rules with clarity and professionalism.
- Built and maintained strong member relationships by delivering personalized, high-touch service, resulting in **97%** Front of House satisfaction rating and a **2nd Michelin Key award**.

- Partnered with F&B, Membership, Pool, and Hotel teams to maintain staff & manager awareness of VIP clientele across the house, coordinate bookings and guarantee consistent and outstanding member experience.
- Updated member profiles with critical information and proactively communicated updates across departments.

Applied ML Researcher at Vanderbilt University, Nashville *Jan 2025 to Mar 2025*

- Benchmarked in **Python** and **PyTorch** several machine learning models on 1k+ images.
- Designed **Python** web scraper to collect public image data from museums, gathering over 1000 data points.
- Benchmarked few-shot segmentation **machine learning/AI** models like SegGPT, DACM, and VAT on hand-labelled data.
- Conducted hardware-constrained model evaluations, surfacing insights that reduced inference time by 22%.

Backend (Python) Engineer at Diocese of Greensburg, Greensburg *Aug 2023 to Aug 2024*

- Maintained websites in **HTML/CSS/Javascript** and analytics data in **Python** for 97 parishes and 12 K-12 school districts in PA.
- Designed and implemented in **Python**, **pandas** and **numpy** weekly export, visualization, and distribution of data across 100+ organizations, saving 100+ hours in **Google Analytics Platform**.
- Automated accessibility reporting with **Python** across 11k+ pages, drastically improving organization-wide ADA compliance by 20% with **Google Lighthouse**
- Deployed custom website navigation widget in **HTML**, **CSS** and **JavaScript** across 12 school sites, improving load speed by 20%.

Machine Learning Intern at Neurabuild, Cape Town *Jul 2023 to Aug 2023*

- Developed **ML** solutions in **Python**, **PyTorch**, and **TensorFlow** to automate sky visibility for portable astronomical observation sites, including semantic segmentation of clear vs cloudy skies and a CNN classifier achieving 95% accuracy in night sky conditions.
- Resolved computer vision thresholding errors in **OpenCV**, increasing segmentation model accuracy by 40%.
- Pre-processed 21k images w/ **Google Cloud Platform (GCP)** GPUs to improve variance in training data, leading to a 6% increase in accuracy.
- Improved existing neuromorphic satellite detection and tracking model performance by 10% using edge detection and **KerasTuner** for hyperparameter optimization.

Consulting/Contracting

Python Full Stack Engineer at XTraffic, Dallas | Contract *Dec 2025 to Jan 2026*

- Established in **Python** secure data pipeline to connect dozens of remote devices to a central application through **Tailscale** and **nginx** reverse proxying in a multi-service containerized env w/ **Docker**, **Keycloak**, **Git**, **Django,** and **PostgreSQL (TimescaleDB)**.
- Developed **RESTful APIs** in **FastAPI** and **Keycloak** w/ **OAuth 2.0** to provide role-based authorization and data filtering for a client-facing data dashboard.

- Prototyped **AWS S3**-compatible backup system with full-stack Django environment in QNAP NAS w/ **boto3** to automatically backup edge device configurations in **PostgreSQL** and allow point-in-time recovery.
- Designed **RESTful API** proxy layer using **FastAPI** to manage configurations across multiple edge devices through a central server, reducing **SSH**-based manual config by ~90%.

Full Stack AI Engineer at Arrowz, Nashville | Contract *Jun 2025 to Sep 2025*

- Developed in **Python** end-to-end machine learning infrastructure for mobile app. Transitioned from **LangChain** to **OpenAI**, reducing model response times by 39% and improving 1k+ user experiences.
- Revamped LLM prompting strategies in w/ **LangChain**, improving user engagement by 26% and boosting weekly retention by 32% across 1k+ active users.
- Implemented **Firebase** authentication and maintained auth endpoints in **FastAPI** to secure logins for indie app user-base
- Assembled three backend prototypes on GPT-4 and GPT-5 with **OpenAI** API to user-test various MVPs with structured **JSON** output, deploying our most user-preferred model.
